## IMI plc

We are a global specialist engineering company that creates breakthrough solutions. We are curious and like to solve problems, partnering with our customers to solve the demands of today and prepare for the challenges of tomorrow. We embrace innovation and care about outcomes that are good for business, everyday life and making a better world – creating lasting impact for everyone.

We design, build and service highly engineered products in fluid and motion control applications. We focus on five market sectors: Industrial Automation, Process Automation, Climate Control, Life Science and Fluid Control, and Transport.

We employ approximately 10,000 people in over 50 countries around the world, find out more about IMI plc here:

## Role Overview

The Project Engineer has responsibility for coordination of all technical activities on assigned projects and that the requirements of the contract are being satisfied.

## Key Responsibilities

- Planning, scheduling, conducting and coordinating the technical aspects of projects
- Accountable for the successful completion of engineering projects
- Extensive regular contact with assigned project functions: Inter-discipline coordination (multiple specialty functions) and overall quality control of the work
- Participation in customer meetings and resolving project issues
- Ensure effective internal and external communication
- Regular project status report (review of engineering deliverables)
- Support "Advanced Engineering Services" during evaluation phase, root cause analysis, solution finding and implementation
- Carries out responsibilities in accordance with the organization's policies and applicable laws
- Identify and evaluate the requirements for the product and prepares the input for detailed processing through design
- Define technical specifications required for the procurement process

Breakthrough  
engineering for  
a better world
